Simin Liu

Pittsburgh, Pennsylvania

simin.liu.1314@gmail.com • www.siminl.com • https://github.com/siminliu99

U.S. Citizen (work authorized in the U.S.)

I'm a PhD candidate at CMU's Robotics Institute. My research combines machine learning and model-based planning and control for structured, scalable autonomy. Recently, I developed a high-performance planner for contact-rich bimanual manipulation, integrating low-level trajectory optimization with high-level graph search. I've also designed safety-enforcing controllers for agile aerial robots, drawing on adversarial learning and formal verification to provide safety guarantees. Previously, I worked on model-based reinforcement learning for millirobot locomotion, enabling adaptation to disturbances and model mismatch.

Education

Carnegie Mellon University   **2020 – 2025**

PhD in Robotics

Thesis: Reachable Sets for Control and Planning: From Reactive Safety to Contact-Rich Manipulation
Advisors: Prof. Changliu Liu, Prof. John Dolan
Honors: Qualcomm Graduate Fellowship
Selected Coursework: Machine Learning; Convex Optimization; Nonlinear Control; Adaptive Control

University of California, Berkeley   **2015 – 2019**

B.S. Electrical Engineering & Computer Science (High Honors, Dean's List)

Thesis: Adaptive Control for Legged Locomotion via Meta-Learning
Advisors: Prof. Sergey Levine, Prof. Ron Fearing
Minor: Mathematics
Selected Coursework: Graduate Deep Reinforcement Learning

Experience

Research Intern   **09/2024 – 05/2025**

Robotics and AI Institute (formerly Boston Dynamics AI Institute)   *Cambridge, MA*

Developing global planning algorithms for more efficient, scalable contact-rich manipulation.

- Devised a hierarchical planner that integrates contact-aware trajectory optimization, collision-free motion planning, and MIP-based graph search.
- Enabled a bimanual KUKA hardware system to reorient large, unwieldy objects using whole-arm contact, not just end-effectors.
- Achieved >60% lower cost plans than a leading method, producing concise, human-like motion.

Research Assistant   **09/2020 – 12/2025**

Intelligent Control Lab, CMU   *Pittsburgh, PA*

Designing control and planning algorithms for agile aerial systems under state/input constraints.

- Synthesized constraint-enforcing control filters for uncertain systems; generated a collision-avoidance filter for a quadrotor with unknown drag in minutes.
- Combined adversarial ML techniques with nonlinear control to scale control filter synthesis to 10-20D; demonstrated on a quadrotor-pendulum platform, where the filter kept the pendulum upright while the quadrotor tracked a trajectory.
- Built and deployed a quadrotor-pendulum hardware stack; validated simultaneous pendulum balancing and flight stabilization in hardware experiments.
- Improved a lab C++ trajectory-optimization toolbox to attain faster convergence and robustness to

infeasible initializations.

- Formally verified the robustness of learned perception components in an aircraft autonomy stack.

Research Assistant — 09/2017 – 05/2019
Robotic AI & Learning Lab, UC Berkeley — Berkeley, CA
Investigating learned control techniques for adaptive millirobot locomotion.

- Built autonomy stack in ROS2 (wrote microcontroller firmware, integrated mo-cap, camera, and Wi-Fi telemetry) and maintained hardware (diagnosis and repair).
- Developed model-based RL pipeline: from offline learning in Tensorflow to online control with MPC.
- Using 1.5 hours of data, the learned controller could reject unseen disturbances like leg loss, terrain changes, state-estimation error, and payload variation.

Skills

Programming: Python, C++
Robotics: ROS2, Mujoco, Drake, OpenCV, IPOPT/SNOPT/CVX
ML: PyTorch, TensorFlow
Languages: English, Chinese

Honors and Awards

- Qualcomm Graduate Fellowship: 18 selected from 182 — **2023**

- UC Berkeley Undergraduate Research Honors: 20 selected from 500   **2019**
- Computing Research Association GHC Research Scholars   **2018**
- Microsoft Undergraduate GHC Scholarship   **2017**
- Top 10% of TAs in UC Berkeley EECS Department   **2017–2018**
- UC Berkeley College of Engineering Dean's List: top 10% highest GPAs **2016–19**
- Tau Beta Pi, Eta Kappa Nu, and Phi Beta Kappa: **2016**
    National engineering, computer science, liberal arts honor societies
- William Olson Science and Engineering Undergraduate Scholarship   **2015**
- ACES Asian-American Undergraduate Scholarship   **2015**

Talks

- "High-Performance Planning for Contact-Rich Manipulation", Robotics Seminar, Duke   **2026**
- "High-Performance Planning for Contact-Rich Manipulation", Manipulation Seminar, CMU   **2026**
- "Reactive Safety for Self-Driving", Qualcomm Graduate Fellowship awardee talks   **2024**
- "Synthesis of Safe Control Filters for Uncertain Systems", European Controls Conference (ECC) **2024**
- "Scalable Synthesis of Safe Control Filters", Conference on Robot Learning (CORL)   **2021**
- "Scalable Synthesis of Safe Control Filters", Safe Autonomous Systems Lab, UCSD   **2021**
- "Sample Inefficiency in Deep-Reinforcement Learning for Robotics", Women in Machine Learning Workshop, ICML   **2020**

Teaching

- CMU 16-711 (Kinematics, Dynamics, and Control), taught by Hartmut Geyer   **Fall 2022**
- CMU 16-811 (Math Fundamentals for Robotics), taught by Michael Erdmann   **Fall 2021**
- UC Berkeley CS188 (Introduction to Artificial Intelligence), taught by Sergey Levine   **Spring 2019**
- UC Berkeley CS170 (Efficient Algorithms and Intractable Problems),   **Fall 2017**-2018
    Taught by Umesh Vazirani, Prasad Raghavendra, Sanjam Garge

Service

Mentoring

- Yogita Choudhary, CMU MS to CMU PhD
- Chase Dunaway, New Mexico Tech BS to CMU PhD
- Dvij Kalaria, CMU MS to UC Berkeley PhD
- Shivesh Khaitan, CMU MS to ML Engineer at Aurora
- Haoru Xue, CMU MS to UC Berkeley PhD
- Kai Yun, CMU MS to MIT PhD
